# Phases of SQL Tuning

---

- 1 Identify poorly performing SQL
- 2 Identify alternate – i.e. better – access plan
- 3 Persuade CBO to use this access plan

# Means to change access plan

---

- ❖ Change the statement
- ❖ Use hint
- ❖ Change statistics
  - ❖ Create or drop an index
  - ❖ Change initialization parameters

# Statistics affecting the CBO

# Backup, backup, backup

When manipulating the statistics, make two exports, one for backup, one to work with.

e.g.

```

  ownname => 'abc', tabname => 'xyz',  
  statab => 'stats_table', statid => 'bkup');
```

```
DBMS_STATS.EXPORT_TABLE_STATS (

  statab => 'stats_table', statid => 'work');
```

# Putting it to work – the SQL
